Why Passkey?

Passkeys are designed to be safer and easier than passwords.

Use password instead

Continue with Passkey

More secure than passwords

Harder to steal and reuse.

Phishing resistant

Built to prevent fake sign-in prompts.

Works with your device

Use your device’s authentication.

Faster sign-in

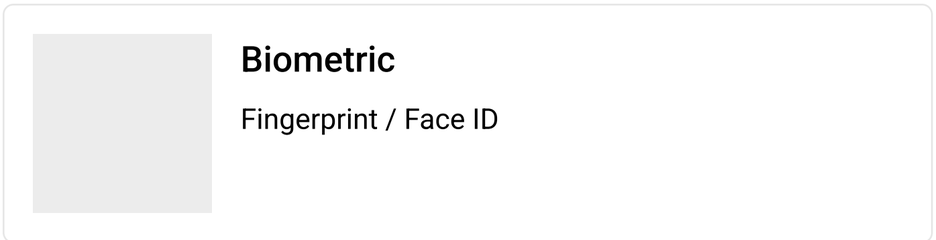

Sign in with a single action.

Create Your Passkey

Choose a biometric or another method to create your passkey.

Use another method

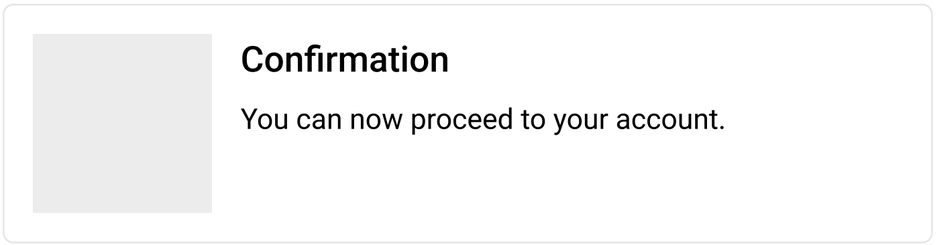

Create Passkey

Passkey Created Successfully!

Your passkey is ready for sign-in.

Continue

Account Ready!

Your account setup is complete.

Go to Dashboard

Next step

Go to your dashboard.

Passkey Unavailable

This device can’t use passkeys. Please sign in using your password instead.

Security

Your transfer is paused until identity verification is complete.

Protected action

Verification is required to reduce unauthorized transfers.

Verify Your Identity

We use a live face scan to confirm it’s really you. Keep your device steady and follow the on-screen steps.

Start Verification

Transfer Funds

High-risk action requires additional verification.

Verify to Continue

Transfer Details

Security notice: Additional verification is required before this transfer can be completed.

Transfer amount

e.g., 1,000

Recipient information

Recipient name / account

Verify to Continue

Camera Permission

Camera access is required to capture your face for verification.

Never share verification codes or passkeys

Only enter verification codes/passkeys inside the Veri Sight flow. If someone asks for them, treat it a…

01 — Accessibility Notes

Low-fidelity documentation: hierarchy, contrast, keyboard, focus, SR support, errors, and recovery when verification fails.

N/A

N/A

Readable text hierarchy

Level 1 (H1): Page/Section title

• Use 1 strong heading for the frame title (e.g., “01 — Accessibility Notes”)….

Level 2 (H2): Subsections

• Each requirement group gets an H2-like heading (e.g., “Keyboard navigation”, “Visible focus states”).

Body text + bullets

• Keep bullets short.
• Use consistent line height.…

Sufficient contrast (grayscale)

Text vs background

Target

• Ensure dark text on light backgrounds and vice versa.…

Status colors (no color dependency)

Low-fi rule

• Do not rely on red/green.
• Use icons + labels + tone differences.…

Keyboard navigation & visible focus

Tab order & reachability

• Tab moves: Top bar links → content sections → interactive elements (inputs/buttons)….

Visible focus states

• All focusable elements show a strong, grayscale focus ring (thick 2–3px outline)….

Focus example blocks (documented)

• [ ] Button (focused): outline ring + “Focus” label.
• [ ] Input (focused): outline ring + caret visible….

Screen reader support (SR)

Labels & instructions

- Every Input has an explicit label.
- Helper text is either referenced via aria-describedb…

Live regions & semantics

- Errors announced via an alert role / live region.
- Success/retry prompts use clear headings.…

Clear error messages

Error formatting standard

- Prefix: “Error:”
- State what failed (camera/passkey verification)....

Error content examples (low-fi)

- “Error: Camera verification failed. Try again or use passkey verification.”...

Alternative actions when camera/passkey verification fails

Camera verification failed

- Primary: “Retry camera verification”
- Secondary: “Use passkey verification”…

Passkey verification failed

- Primary: “Retry passkey verification”
- Secondary: “Use camera verification”…

02 — Design Handoff Notes (Desktop)

Main flows, interaction states, errors/recovery, reusable components, spacing/typography consistency, and future high-fidelity notes.

N/A

N/A

02 — Design Handoff Notes

Main flows, interaction states, errors/recovery, reusable components, spacing/typography consistency, and future high-fidelity notes.

N/A

N/A

Layout & spacing consistency (grayscale)

Spacing scale (low-fi rule)

• Use consistent vertical rhythm.
• Section blocks separated by dividers.…

Grid assumptions

• Primary documentation is single column with optional 2-column blocks for comparisons.…

Typography consistency

Type levels

- H1: frame title
- H2: section headings…

Grayscale-only

- Use tone differences for emphasis.
- Avoid color to indicate meaning; use labels/icons…

Main user flows (camera + passkey)

Flow A — Start verification

1) User lands on verification step.
2) Choose method (camera or passkey).…

Flow B — Failure recovery (switch method)

1) Verification fails (camera or passkey).
2) Error message appears with primary recovery a…

Important interaction states (documented)

Idle / ready

- CTA button enabled.
- Method selection visible.…

In progress

- Primary action shows “Verifying…” label.
- Disable method switch controls only if required.…

Success

- Clear success heading.
- Provide next action (Continue).…

Error / blocked

- Error block with “Error:” prefix.
- Visible, keyboard-focusable recovery buttons.…

Error and recovery states (handoff checklist)

When camera verification fails

- Show error summary + recommended action.
- Offer “Retry camera” (primary) and “Use passkey”…

When passkey verification fails

- Show error summary + recommended action.
- Offer “Retry passkey” (primary) and “Use camera”…

When both methods fail (recovery escalation)

- Provide a final recovery option: “Contact support” / “Request help”.…

Reusable components (for high-fidelity implementation)

Verification Method Selector
Camera / Passkey tabs or buttons

Inline Field + Helper Text
Label, short instruction, optional additional info

Status / Feedback Banner
Idle → Verifying → Success/Error (no color dependency)

Error Alert Block
Error heading + message + recovery actions (primary/ secondary)

Focus-safe Primary/Secondary Buttons
Keyboard-first, visible focus ring, consistent sizing

Accessibility considerations (must-haves for implementation)

Keyboard

- Logical tab order.
- Visible focus ring on all interactive controls.…

Screen reader

- Alerts use aria-live / role=alert.
- Success and failure states announced.…

Error messaging

- Error prefix “Error:”
- Next steps explicitly stated.…

No color-only meaning

- Use labels (“Error”, “Success”), icons, and structure.
- Ensure grayscale contrast for text + outlines.

Future high-fidelity implementation notes

What to refine next

• Confirm exact type scale, button sizes, and divider spacing.…

What to keep consistent

• Maintain primary/secondary recovery hierarchy.
• Keep grayscale-only styling approach.…
